

Make Your Own Telescope

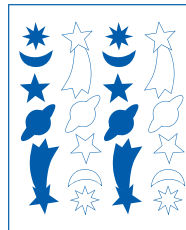

Kit for 12 • #ISPY

Your Kit Includes:

12 Telescopes

12 Metallic Sheets

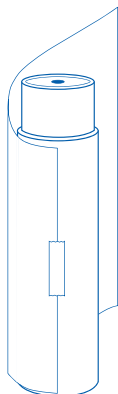

12 Sets of Stickers

You will need tape to create your Telescope. You may also like to use art materials such as crayons, markers, and colored pencils to decorate the telescope.

- 1 You will be decorating the larger outside tube with the metallic paper. If you wish you can decorate the smaller inner tube with crayons, markers or colored pencils. Do not place stickers on the smaller inner tube. Doing so could prevent the telescope from sliding properly.

- 2 Decorate the outside of the large tube of the telescope with the metallic paper and stickers. You can use the silver or the blue side. Wrap the metallic paper around the outside of the larger tube and tape one edge to the tube. Overlap the other edge and tape to hold in place. The stickers can also be used to hold the overlap piece in place.

- 3 Decorate the metallic paper with the stickers included.
- 4 Hold your telescope up to your eye and aim it at an object. Slide the larger tube out and watch the object become larger and closer. It really works! Have fun exploring!
